Wednesday June 20th

Today was the first day I attended of the Rocky Mountain Biohackathon. I mistook the schedule thinking today was the first day of the actual hacking, however, I was pleasantly surprised by the lineup of excellent speakers. Speakers included Ben Langmead, of Bowtie fame, on pan-RNA seq processing pipelines on the cloud. John Rinn described bar-coding RNA like the first Juicy Fruit gum package and James Taylor, of Galaxy web-server fame, described novel ways to interpret chromatin structure.

Martin introduced me to assemblathon, optical mapping, and the troubles of short read assembly.

NCI (\$27 a sample for metagenomics)!?!)

I enjoyed a lovely bike ride around Boulder and returned to the conference for more interesting talks. I did have the misfortune of leaving my sunglasses somewhere between the afternoon session and when I left the conference. Stressed out, I ran over to mincha/maarav at EDOS.

Goals: Finish Review Article

Thursday June 21st

Friday June 22nd

Saturday June 23rd

Sunday June 23rd
